

Ideation Phase Brainstorm & Idea Prioritization Template

Date	02 NOVEMBER 2025
Team ID	NM2025TMID02965
Project Name	Educational Organisation using ServiceNow
Maximum Marks	4 Marks

Educational Organisation using ServiceNow:

This guided project, Educational Organisation using ServiceNow, demonstrates how to manage user data efficiently and prevent accidental deletion of users who are still associated with active academic or administrative incidents within the system.

The process begins by creating test users such as faculty, staff, or student accounts, and assigning incidents related to institutional activities. A Business Rule is then configured to ensure that if any user is currently linked to an active incident, their deletion request is automatically restricted.

This safeguard ensures that critical data and work records are preserved, maintaining smooth operational continuity and accountability

Step-1: Team Gathering, Collaboration and Select the Problem Statement:

Reference: <https://www.mural.co/templates/brainstorm-and-idea-prioritization>

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

🕒 10 minutes to prepare
👥 1 hour to collaborate
👤 2-8 people recommended

➕ Before you collaborate
A little bit of preparation goes a long way with this session. Here's what you need to do to get going.
🕒 10 minutes

A Team gathering
Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

B Set the goal
Think about the problem you'll be focusing on solving in the brainstorming session.

C Learn how to use the facilitation tools
Use the Facilitation Superpowers to run a happy and productive session.

1 Define your problem statement
What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.
🕒 5 minutes

How might we [your problem statement]?

Key rules of brainstorming
To run an smooth and productive session

- Stay in topic.
- Encourage wild ideas.
- Defer judgment.
- Listen to others.
- Go for volume.
- If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping:

Fig2: Image that describes the work done by teammates.

Brainstorm:

Team members collaboratively shared creative ideas on how to improve user management and automate workflows within the educational system using ServiceNow. The open discussion encouraged participation and helped generate innovative approaches to ensure data integrity and system efficiency.

Idea Listing:

All proposed ideas—such as implementing automated business rules, adding user activity validation, and improving notification systems—were documented carefully to capture every valuable input from the team.

Grouping:

Similar ideas were grouped into categories like *User Management*, *Automation Rules*, *Data Integrity*, and *System Alerts*. This helped the team identify core focus areas and streamline solution development.

Action Planning:

From the shortlisted ideas, clear actions were planned—such as developing a business rule to prevent user deletion, assigning roles for testing and validation, and setting implementation timelines. Each team member was given specific responsibilities to ensure smooth execution and measurable progress.

Step-3: Idea Prioritization:

4

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

30 minutes

Idea Prioritization:

Idea polarization helps break down complex projects into clear, focused components. In this project, the main goal is to automate student admissions and academic performance tracking. This approach ensures data accuracy, efficiency, and transparency in educational workflows. By polarizing ideas, we can separate admission management from student progress tracking, making each module easier to plan and implement. It also highlights the importance of secure data handling and controlled access. Clear visual tools like diagrams and flowcharts improve understanding and communication, ensuring smooth execution of the system.
