Customer Problem Statement Template:

Educational institutions face challenges in managing student admissions and academic progress efficiently. Manual processes often lead to delays, data duplication, and errors in maintaining student information. This causes confusion among administrators, faculty, and students who rely on accurate and timely updates.

The lack of automation and centralized tracking can also affect transparency and overall academic management. They need a system that streamlines admissions, automates academic tracking, and ensures accurate record management. A digital workflow with auto-filled data, status updates, and instant notifications would help reduce errors and save time. This solution will enhance efficiency, improve communication, and provide a seamless experience for all users within the educational organization..

Problem & Solution Table		
Problem	Description	Solution
Data Integrity Risk	Deleting users who are still linked to incidents causes loss of incident history and incomplete records.	Implement a validation check to block deletion if active incident assignments exist.
User Confusion	Admins may accidentally remove users without realizing they are assigned to open incidents.	Show clear warnings and display a list of linked incidents before confirming deletion.
Compliance Issues	requirements mandate preserving incident records and responsible user assignments.	Automatically archive user-related data or reassign incidents before allowing deletion.
Workflow Disruption	Removing assigned users disrupts workflows and delays incident resolution.	Create a reallocation workflow that reassigns incidents to other users or a default incident owner.
Audit Challenges	Without safeguards, audit trails are incomplete, making it difficult to trace actions and responsibilities.	Maintain detailed logs and enforce deletion policies to ensure audit records remain intact and accessible.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	an Admin	Manage student admission details	the system requires repetitive manual entries	there is no automation to fetch or prefill existing student data	tired and frustrated due to time-consuming work
PS-2	a Faculty Member	Track student academic progress and update marks	data is scattered and not updated in real time	there's no centralized system to manage academic records efficiently	confused and concerned about record accuracy

■ Problem Statement PS 1:

As an **Admin**, I am trying to manage student admission details efficiently, but the system requires me to manually enter repetitive information for each student.

This makes me feel frustrated and slows down the admission process, especially during peak admission periods. I need an automated way to fetch and prefill existing data to save time and reduce manual errors.

✓ Problem Statement PS 2:

As a **Faculty Member**, I want to update and track student academic progress seamlessly. However, the system lacks real-time updates and proper linkage between academic data and student profiles.

This leads to confusion and delays in grade management. A centralized and automated progress tracking system would ensure accuracy, transparency, and better academic reporting.
