

Ideation Phase

Empathize & Discover

Date	02 NOVEMBER 2025
Team ID	NM2025TMID02965
Project Name	Educational Organisation using ServiceNow
Maximum Marks	4 Marks

Empathy Map Canvas:

In the Empathize & Discover phase, the team studies how administrators, teachers, and staff manage student admissions and academic progress in the current system. They observe that manual record-keeping and paper-based processes often lead to delays, misplaced information, and difficulty in tracking student performance. Through interviews with staff and students, the team learns that users face frustration due to repetitive data entry and lack of a centralized platform for updates and communication.

Gathering these insights helps the team understand the real challenges faced in managing academic workflows. Recognizing these pain points highlights the need for an automated, transparent, and easy-to-use digital system. These discoveries guide the team in designing solutions that enhance efficiency, accuracy, and user satisfaction across the educational organization.

The empathy map helped us understand user challenges in managing student admissions and progress tracking. It highlights their pain points such as repetitive data entry, missing records, and delayed updates. It also shows their actions and needs for a simpler, automated, and error-free process. This understanding guided us to design a digital system that streamlines admission management and academic tracking while improving efficiency and user satisfaction.

Example: **Educational Organization using ServiceNow**

By deeply understanding the users through empathy mapping, we identified the major challenges and frustrations faced by administrators, faculty, and students in managing admissions and academic progress. These insights revealed pain points such as lack of automated workflows, difficulty in tracking student details, and absence of centralized data handling. As a result, we designed a more efficient and user-friendly system in ServiceNow that automates admissions, updates student information, and simplifies academic tracking. This ensures smooth operations, reduces manual effort, and enhances transparency, accuracy, and communication across the educational organization.
