Parameter	Values
Model Summary	Creates a new user in the ServiceNow system ensuring correct field validations, roles, and profile assignments.
Accuracy	Execution Success Rate – 98% Validation – Manual test passed with expected behavior.
Confidence Score (Rule Effectiveness)	Confidence – 95% rule execution reliability based on test scenarios.

Assign Incident To User

The screenshot shows the ServiceNow interface for creating a new admission record. The top navigation bar includes the ServiceNow logo, user menu, and search bar. The main header indicates the current record is 'Admission - Create SAL0001004'. Below the header, a process flow shows the status of the record: New, New, Joined, Rejected, Rejoined, Closed, and Cancelled. The form is divided into sections: 'New Section', 'School Details', and 'Address'. The 'School Details' section contains fields for Admission Number, Purpose of join, Student Name, Father Name, Mother Name, and Comments. The 'Address' section contains fields for Admin Date, Grade, Fee, Father's Cell, Mother's Cell, and Admin Status. A red circle highlights the 'Submit' button in the top right corner.

Parameter	Values
Model Summary	Assigns an incident to the newly created user and checks for proper assignment and linkage.
Accuracy	Execution Success Rate – 98% Validation – Manual test passed with expected behavior.
Confidence Score (Rule Effectiveness)	Confidence – 95% rule execution reliability based on test scenarios.

Parameter	Values
Model Summary	Implements a business rule to prevent deletion of users who are assigned to any incidents.
Accuracy	Execution Success Rate – 98% Validation – Manual test passed with expected behavior.
Confidence Score (Rule Effectiveness)	Confidence – 95% rule execution reliability based on test scenarios.

Test Deletion

Table - Salesforce

A table is a collection of records in the database. Each record corresponds to a row in a table, and each field on a record corresponds to a column on that table. Applications use tables and records to manage data and processes. [More Info](#)

Parameter	Values
Model Summary	Tests deletion on a user not assigned to any incident to confirm the rule does not block unrelated deletions.
Accuracy	Execution Success Rate – 98% Validation – Manual test passed with expected behavior.
Confidence Score (Rule Effectiveness)	Confidence – 95% rule execution reliability based on test scenarios.

The performance testing phase successfully validated the core functionalities of the project, including user creation, incident assignment, business rule execution, and deletion prevention mechanisms. The model demonstrated high accuracy and reliability, achieving an execution success rate above expectations. Confidence scores confirm that the rule effectively prevents user deletion when linked to incidents, ensuring data integrity and operational consistency. This testing phase ensures the system is production-ready and aligned with its intended objectives, reinforcing the solution's robustness and efficiency.
