

Project Design Phase

Solution Architecture

Date	02 NOVEMBER 2025
Team ID	NM2025TMID02965
Project Name	Educational Organisation using Service
Maximum Marks	4 Marks

Solution Architecture:

Goals of the Architecture:

- Automate admission and student progress management through ServiceNow
- Maintain accuracy and consistency of student information across modules
- Reduce manual data entry and administrative workload

Key Components:

- **Admission Table** – stores and manages student admission details
- **Salesforce Table** – holds student personal and contact information
- **Student Progress Table** – tracks academic performance and progress
- **Client Script & Business Rule** – automate data fetching, validation, and updates

Development Phases:

1. Create sample student entries in the Salesforce table
2. Implement automated field population using Admission records
3. Link Admission and Student Progress tables for academic tracking
4. Test workflows for auto-filled fields, validation, and result calculation

⊗ Solution Architecture Description:

The solution architecture for the *Educational Organisation using ServiceNow* project is designed to safeguard user integrity by preventing the deletion of users who are currently assigned to active incidents. This is achieved through the implementation of a **“Before Delete” Business Rule** on the sys_user table.

When a deletion attempt is made, the system automatically checks the **incident table** to verify if the user is associated with any ongoing incidents via the assigned_to field. If such an association exists, the deletion process is immediately blocked, and an appropriate error message is displayed.
